**Q1 Read the following passage and answer the questions that follow.
(5M)**

I. A forest is a biotic community which is composed of trees, shrubs and other woody vegetation. Forests are a valuable wealth of a nation. The timber obtained from forests is used for building houses, ships, furniture, sports goods, matches, paper etc. Bamboo canes are used for making ropes, sports goods, umbrella handles, etc. Many tribes that live in forests depend upon it for their livelihood. Forests provide dyes, gum, honey, wax, silk, ivory, etc.

II. Forests provide shelter for plants and animals. They also help in preventing soil erosion. Forests help in reducing atmospheric pollution by absorbing carbon dioxide and particulate matter. People always appreciate the beauty and calm of forests.

III. Destruction of forests is a threat to environment, quality of life and economy of a country. Deforestation has depleted the forests to such an extent that it has become out of man's control. Man has destroyed forests for building roads and railways and also for setting up industries. Deforestation results in excessive soil erosion. Floods and droughts are becoming a norm and a change in climate is clearly seen in the atmosphere.

IV. Man has now realized the importance of forests and the need for its conservation. Van Mahotsava is held every year in India to celebrate forests and wildlife and find ways for their protection. Alternate resource of energy, such as biogas is seen as a suitable substitute for fire wood. Modern methods of forest management are encouraged which includes use of irrigation, fertilizers, pest management and afforestation programmes. Urban forestry programme aims at growing flowers and trees along the road side.
